

## **COMBINATION OF PARTITION ASSEMBLY AND CONTAINER AND METHOD OF USE**

### **Abstract of the Disclosure**

A method and apparatus is provided for removably securing a partition assembly inside a container without bending the individual partitions of the partition assembly. The partition assembly divides the space inside the container into separate cells. The assembly comprises a plurality of first slotted partitions intersecting with a plurality of second slotted partitions to form a matrix. The matrix is held in the container with hook and loop fasteners.
